What Is Resilience?

Choose a Good Frame

In short, resilience is the ability to bounce back from life's adversities, stressful events, and emotionally-taxing situations. Resilience allows people to grow, heal, and overcome their situations instead of letting hard times get the best of them.

Without resilience, people can quickly become sad, overwhelmed, and tired of their life. In fact, having little resilience is one of the main reasons why people feel overwhelmed by their situations, get burnt out at their job, and feel as though they are living a less-than-ideal life.

With this in mind, resilience is the key to overcoming any difficult situation and living a better life. So, it is imperative to know the limits of your own resilience and learn new techniques to become more resilient in the future.

Why Resilience Is Important?

Resilience is highly important for one's quality of life. In fact, resilience is one of the highest determiners for one's enjoyment, fulfillment, and growth throughout life. For this reason, resilience is important for living the best life possible. If you do not learn resilience, you can easily be taken down by any of life's challenges. Some of the most common adversities faced in life include the following: ● Changing careers ● Stressful work environment ● Divorce ● Death of a loved one ● Financial troubles ● Moving ● Raising children ● And more

Factors Of Resilience

Although resilience looks different for every person, there are certain factors that most, if not all, resilient people have in common. Here are the most important factors of resilience:

- **Social Support:** Social support is one of the top determiners of resilience. Resilient people almost always have a strong support system made up of their family members, friends, and community.
- **Realistic Planning:** Resilient people are realistic in terms of their abilities, limitations, and control. This allows them to make and execute realistic plans that play up their strengths and work around their weaknesses.
- **Confident:** Confidence is an important aspect of resilient people. Resilient people know their strengths and abilities, which allows them to confront adversity with confidence.

- **Healthy Coping Mechanisms:** Having healthy coping mechanisms is a crucial aspect of resilience. Coping mechanisms allow a resilient person to problem-solve their way through adversity and overcome the hardship.

- **Strong Communication:** Resilient people have strong communication skills. This allows them to communicate when they need help achieving a goal, finding resources, or taking action.

- **Regulate Emotions:** Resilient people manage overwhelming emotions healthily and respectfully. This allows them to acknowledge the emotion without letting it overcome them.

Can You Build Resilience?

At this point, you may be thinking, "What if I am not resilient?" Luckily for you, resilience can be built. It is not a destination that people land on or a genetic predisposition that people are born with. Instead, resilience is nothing more than a journey that is built through time, hard work, and patience.

There are a number of resilient-building skills that can be learned and taught. If you think you are not resilient, you can break through your current habits to become more resilient in the future. In order to become more resilient though, you need to be self-aware of your current shortcomings and bad habits and change them so that way they are healthier and resilient-driven.

Resiliency Types

&

Hardships!

Hardships & Resilience

Interestingly, there are four types of resilience: psychological, emotional, physical, and community. Each type is useful for different situations, meaning you will use specific types of resilience to combat specific scenarios in your life. This allows you to tailor the resilience strategy for the difficult situation you are currently facing. At the same time, though, it is important to note that most adverse situations require more than one type of resilience at a time

- **Major Life Problems:** Major life problems are those that have a lasting impact on your life. This can include the death of a loved one, incurable illness, divorce, losing a job, or anything else that will impact your life significantly.
- **Temporary Problems:** Temporary problems are those that disrupt your daily life but do not last more than a month or so. Things such as the flu, a tough deadline at work, your child's upcoming math exam, or a tough criticism said by your significant other are all temporary problems.
- **Daily Problems:** Daily problems are those that we face every day. Everyday chores, an annoying coworker, or exercising regularly are all daily problems. Daily problems rarely have a significant impact on your life.

Psychological Resilience

Psychological resilience, or mental resilience, is when you are able to think clearly, flexibly, and creatively. In many ways, psychological resilience is your ability to problem-solve, conceptualize goals, and execute strategies. Without psychological resilience, you might not be able to effectively think through tough situations.

- **Major Life Problems:** Psychological resilience is key to bouncing back from major life changes, such as the death of a loved one, divorce, or career change. If you are not psychologically resilient, it can be difficult to interpret the pain you're feeling and strategize away to becoming happier and healthier in the future.
- **Temporary Problems:** Instances such as temporary illness, an impending deadline, or an angry client are all instances of short-term problems that require psychological resilience. Psychological resilience will allow you to overcome these challenges by interpreting the problem and coming up with effective solutions.
- **Daily Problems:** Every day, we face daily challenges that require us to be psychologically resilient. For example, whenever you are doing puzzles, trying a new hobby, or reading a book, you have to be engaged and have psychological resilience. Although daily life might not require high amounts of psychological resilience, psychological resilience will allow you to better enjoy and succeed in your daily life.

Emotional Resilience

Arguably one of the most difficult types of resilience to master is emotional resilience. Emotional resilience is your ability to accept adversities and find positive outlooks in grim circumstances. Emotional resilience is keenly connected to emotional intelligence, emotional awareness, perseverance, and optimism.

- **Major Life Problems:** Emotional resilience is an important way to handle major life problems, such as getting fired, a divorce, or a death in the family. It allows us to understand our emotions but also understand that it will get better over time. Without emotional resilience, major life problems can easily feel overwhelming and all-encompassing.
- **Temporary Problems:** Often, we find ourselves angry or upset whenever someone doesn't act the way we think they should. This creates temporary problems that require emotional resilience. Emotional resilience allows us to understand that the problem is only temporary, cope with our emotions in a healthy way, and prepare our emotions for the next time we find ourselves in a similar situation.
- **Daily Problems:** Every day, emotional resilience is used to help us imagine, dream, and create the life we want. We often reflect on our lives through writing, making art, or walking. Emotional resilience is the key to helping us understand our reflections and feelings.

Physical Resilience

Physical resilience is our body's capacity to face and accomplish physical challenges, maintain stamina, and recover whenever injured. Physical resilience can be important if you have a major life-altering injury or find yourself in a life-threatening situation. ● Major Life Problems: It is important to be physically resilient whenever you have a life-altering injury such as spinal surgery or a car accident. After these injuries, it will take months to recover to your original state, if at all. Your ability to keep moving, work through the pain, and get stronger is an example of physical resilience.

● Temporary Problems: Temporary problems that require physical resilience include things like marathons, hiking, or sports. These instances require physical resilience, but you often voluntarily put yourself in these situations. With that being said, there are also situational problems that you have no control over, such as domestic violence. In these situations, you need physical resilience in order to perform your best under short-term pressure.

● Daily Problems: Every day, we need to be physically resilient. From walking to getting a good night's sleep, physical resilience allows us to stay healthy and happy. Eating healthily, exercising daily, and sleeping well are all parts of physical resilience on a daily basis. Unlike the two previous forms of resilience, physical resilience is physically painful and physically taxing. It will be easier to see the results of physical resilience, though.

Additionally, emotional and psychological resilience can impact your physical resilience. For example, suppose you are in a bad car accident and need to go through extensive physical therapy. If you are not emotionally and psychologically resilient, it will be more difficult to work through the pain and be physically resilient.

Community Resilience

The last form of resilience, community resilience, is different from the other three forms. The first three forms of resilience deal with one's ability to be resilient to different situations. Community resilience, on the other hand, deals with a community's ability to be resilient and respond to adverse situations. Community resilience is important for instances such as natural disasters, acts of violence, or economic hardships.

Although community resilience is highly important, we will not focus on community resilience in this book. Instead, we will focus on the first three forms of resilience since they are what you have control over.

Using The Form Of Resilience

Let's look at a stressful scenario and discuss how each form of resilience would or would not help the situation. Take, for instance, that you have lost your job and do not know where you will get your livable income.

- **Psychological Resilience:** Psychological resilience is important when you lose your job. It will allow you to both learn from your mistakes and strategize or brainstorm ideas for new job leads. In other words, it helps you think your way out of the problem.

- **Emotional Resilience:** Emotional resilience is important when you lose your job too. Losing your job can take a blow to your self-esteem, causing you to feel inadequate and incompetent. Emotional resilience allows you to interpret those feelings and see the light at the end of the tunnel. In other words, it prevents your emotions from getting the best of you.

- **Physical Resilience:** Physical resilience may help you when you lose your job. If you are finding that getting fired is extremely difficult for you emotionally and mentally, you should use your physical resilience to offset those feelings. You can go to the gym, jog, or eat healthily in order to combat those feelings of inadequacy and stress. This situation exemplifies that you may need to use more than one, if not all, types of resilience to combat adverse situations.

The Pillars To Resilience

Start With Light Edges

Regardless of the type of resilience, there are certain components that make up all types of resilience. These components make resilient thinking meaningful and impactful in your life. Without these components, it can be difficult to become resilient or to experience the benefits of resilience. Let's look at the four components of resilience: connection, wellness, healthy thinking, and meaning.

Connection

Connection is your ability to connect with your family members, friends, and community. It is a common misconception that resilient people do not need help from others, but this misconception is completely false. In contrast, the most resilient people have some of the strongest connections around.

The reason that connection is important for resilience is that it allows you to have a support system whenever you fail. Without having anyone to talk to or help you, you can easily feel overwhelmed by your life and have nowhere to turn to whenever you fail.

Wellness

Wellness is the active process of becoming more aware and making choices to become healthy and living a fulfilling life. Although wellness includes being physically fit and healthy, it is intimately related to emotional and mental change and growth as well. It is important to have wellness in order to live a high-quality life. Wellness relates to your physical health, mental health, emotional health, and personal growth.

Healthy Thinking Healthy thinking is **your** ability to think realistically, flexibly, and creatively. For you to think healthily, you must be able to accurately interpret a situation, strategize how you're going to handle it, and effectively execute your strategy. More so, healthy thinking is about learning from your mistakes and incorporating them into your new plans, goals, and strategies.

If you think healthily, though, resilience comes much easier. The reason for this is that healthy thinking will allow you to accurately understand a situation, which will then allow you to properly respond to it.

Meaning

Meaning is the ability to connect events, ideas, and feelings into a greater purpose of life. Meaning is what allows your life, actions, and ideas to feel impactful and meaningful in the world around you. If you do not have meaning, it is easy to feel dragged down by life's adversities.

Network in Times Of Loss

Building Connections

Times of loss can be some of the most difficult, challenging, and stressful times in a person's life. Whether it's losing a job, losing a spouse, or losing your health, loss requires resilience so that way you can mourn properly but bounce back for the future.

One of the best ways to bounce back from times of loss is to build your connections elsewhere. As we have previously discussed, having strong support systems is an imperative part of being resilient. If you do not have a good support system, you may have nowhere to turn to if you're lost and need help back up.

Benefits Of Connection

Once again, connections are a vital part of resilience. The reason for this is that human beings are social creatures and having good connections and relationships with other human beings results in a number of healthy benefits. In fact, studies have shown that the absence of connection causes distress. In situations that are already stressful, lacking emotion exacerbates the distress.

More so, lacking good social support leads to poor mental health, poor cardiovascular health, and other health problems. In contrast, though, having a strong support system is good for your wellbeing and health. Here are some benefits of having valuable connections in your life:

- Improves your ability to cope
- Alleviates the effects of distress
- Promotes lifelong good mental health
- Improve self-esteem
- Lowers cardiovascular risks
- Promotes healthy lifestyle habits

Quality Vs. Quantity Connections

With that being said, it is important to distinguish quality versus quantity connections. In order to get the most benefits of your social support network, it is important to fill your network with people who are kind, supportive, and challenge you to grow. If your network is full of people who really don't care about you, it will not be supportive during your times of need.

Cont'd

If you do not have many quality connections at the moment, that is okay. You are not alone. Many people feel isolated and alone in the world. Although this is your current state, it doesn't have to be your future one. There are ways to build your connections so that way you are less isolated in the future.

Even if you already have a lot of connections, there's nothing wrong with looking for more. As social creatures, we love to be challenged by and engaged with a variety of people. So, these ideas might work for you even if you already have a large social support network. Here are some good ideas to help you find connections for your social support network:

- **Volunteer:** One of the best ways to find connections is to volunteer at a local charity or organization that you care about. Volunteering will allow you to connect with your community, as well as meet others who share similar interests and values. Not only will volunteering get you connections, but it will also help you connect to a deeper meaning at the same time.
- **Join A Fitness Group:** Another way to find connections is to join a fitness group. Since daily exercise should already be a part of your daily schedule, it is a good idea to join a group so that way you are continuing to exercise while meeting new people. Look at gyms in your area or go to a local Community Center.
- **Take A Class:** You can also take a class at a local college or Community Center to meet new people interested in a similar topic. Not only will this class expose you to potential connections, but it will also cultivate your psychological resilience as it teaches you new hobbies and ideas.
- **Look Online:** With the modern age, one of the best ways to meet people is online. Joining Facebook groups or following inspirational people on Instagram can be a great way to connect with people with similar interests and mentalities. There are even online support groups for specific times of loss, which will allow you to connect with people who are experiencing the same feelings as you. Make sure to pick a reputable site and be cautious about arranging in-person meetings.

How To Maintain Healthy Connections

Once you have met people who you like and want to deepen your relationship with, it is important to develop and maintain the connections. Here are some ways to nurture your relationships so that way they may turn into a healthy support system in the future: ● Stay In Touch ● Don't Be Jealous ● Listen.

Wellness & Mental Health

Factors Of Resilience

Mental health is an important part of living a well-lived life. Unfortunately, poor mental health floods society. In fact, it is estimated that 7.6% of persons aged 12 years and older experience depression, and there about 47,173 suicide deaths a year.

With these stats in mind, it is no wonder that we are currently going through a mental health crisis. More so, physical health is an equally important aspect of living a highquality life.

Although life expectancies are increasing over time because of advancements in medicine, many people still struggle with incurable diseases every day or are diagnosed with painful disorders that affect their daily lives.

Because of this, it is important to foster wellness during times of poor mental and physical health. Of course, wellness may not treat or cure the underlying issue, but it might alleviate symptoms or allow you to comprehend the disease better.

How To Foster Wellness For Mental Health Wellness,

in terms of mental health, means actively trying to make your mental health better. If you are struggling with your mental health, it is important to be as optimistic and kind to yourself as possible. Remember that you are worthy and capable of growth, even if it feels like you are drowning.

● Start A Gratitude Journal:

A gratitude journal gives you the opportunity to focus on things that you are thankful for. Even during times of poor mental health, there is always something that you can be happy about. Focusing on one or two things you're grateful for a day will help you to look past your negative thoughts and feel more optimistic throughout the day.

● Meditate:

Meditation is the art of trying to sharpen your focus and mind. Meditation is a great practice for improving your mental health because it allows you to acknowledge your thoughts and feelings as they come to you but gently release them as the thought finishes.

- Say Positive Affirmations:

Affirmations have been proven to help alleviate symptoms of poor mental health and increase optimism. Say positive affirmations that are tailored to your needs and feelings morning and night. You can either say the affirmations out loud or in your head.

- Talk To Your Connections:

Your connections are there to help you when you need a friend. Talk to a well-trusted connection when you need to talk about your thoughts and feelings.

- Talk To A Health Care Professional:

Talking to a health care professional can be one of the best ways to foster wellness for your mental health. Doing so will give you the opportunity to talk through your feelings and gain helpful and effective strategies for coping and working past them.

- Exercise: If able, exercise. Depending on your limitations or illnesses, exercising may be really restricted, potentially causing you to feel like you are not working out at all.

- Eat Healthily: No matter what physical illness you may be going through, you can always eat healthily. Make sure to eat healthy vegetables, fruits, and proteins.

- Get Your Friends Involved: Improving your physical wellness is difficult when you don't have any support.

- Sleep: Although it may seem obvious, make sure that you prioritize sleep.

How To Foster Wellness For Physical Health

Physical wellness has to do with your health as well as improving it, no matter your starting point. Depending on the health conditions or needs, the strategies you implement will look different from person to person.

It is important to consult a doctor about what is best for your needs. Do not push yourself unnecessarily or cause yourself any pain. Instead, focus on pushing yourself to be just a little bit better than before so that you are challenged, but not defeated.

The Importance Of Thinking Healthy?

Healthy Thoughts during Difficult Times

Whenever you're going through a difficult time, it can be really easy to get caught up in unhealthy thinking. These unhealthy thoughts make you feel even worse about the situation even if they do not accurately reflect the situation at all. Unhealthy thinking can be especially difficult to avoid if the difficult time is also uncontrollable.

Uncontrollable situations immediately cause humans to play out scenarios, question the past, and question our abilities. As a result, we get stuck in a cycle of unhealthy thinking that perpetuates a negative mentality and diminishes resilience.

Recognize Thinking Traps:

One of the most important ways to think healthy is to recognize thinking traps. Thinking traps are unhealthy ways of thinking that are common whenever we feel sad, angry, anxious, depressed, or stressed. Additionally, you can fall into thinking traps just whenever you are tired or not eating well. Here are the most common thinking traps as well as examples of them:

- **Overgeneralization:** Overgeneralization is when you connect a negative situation to a constant cycle of bad things that happen. Using words like "always" or "never" is a common sign of overgeneralization.
- **Black And White Thinking:** black and white thinking is when you see things as only being completely right or wrong, good or bad, or perfect or terrible. People who think in black and white tend to see things as a complete failure or complete success, with no middle ground.
- **Labeling:** Labeling is when you only say negative things about yourself or others.
- **Mind Reading:** Mind reading is when you jump to a conclusion about what others are thinking even if you have no evidence to support it.
- **Fortune Telling:** Fortune telling is when you predict something bad will happen even if there is no evidence to support it.
- **Mental Filter:** Mental filter is when you only focus on the negative parts of a situation and ignore the good.
- **Emotional Reasoning:** Emotional reasoning is when you believe that your feelings reflect the situation.
- **"Should" Statements:** Should statements are when you tell yourself how you should or must act.
- **Discounting Positives:** Discounting positives is when you discount the positive things that you do or are said about you.

How To Think Healthy Thoughts

If you find yourself thinking unhealthy thoughts, there are a number of ways to improve your thinking abilities, here are the most common:

1. Separate Your Thoughts From Actual Events

One of the most common reasons why people think unhealthily is that they think their thoughts are the same as the event. Consider the actual event and compare it to your interpretation of it. What actually happened? What facts would everyone agree on? How do you feel? What are your behaviors? How do other people feel? What are their behaviors?

2. Identify and Challenge Thinking Traps

Whenever you are thinking unhealthy thoughts, identify the thinking trap you're falling victim to and challenge it. For example, if you see that you are falling victim to black and white thinking, try to pose a middle ground perspective on the situation.

You can challenge the thinking trap by examining the evidence, seeing if there is a double standard, or conducting an experiment.

3. Accept Your Limitations

Another common culprit for unhealthy thoughts is ignoring your limitations. There are certain things that we as humans are simply unable to do. If you find yourself in an uncontrollable situation, recognize that it is uncontrollable, and cut off any thoughts that imply you have control over the situation.

Finding Purpose When Alone

Finding Purpose When Lost

If you're feeling lost, it is important to re-find your purpose. Chances are, a difficult situation, whether it be a divorce or the death of a family member, has caused you to feel separated from your life's purpose, and you feel as though your purpose has been taken from you and you don't know where you are in the world anymore.

If you feel like this, it's completely understandable to feel beat down by adverse situations. Whenever you have purpose, life tends to come easier. Work has meaning, friends are more enjoyable, and your life has context. Purpose is what makes life meaningful and worthwhile. Without purpose, though, it can be difficult to get up in the morning, let alone go to a job you hate or work on a marriage that simply isn't working.

Why Purpose Helps Resilience

Having purpose is extremely important to your resilience. Purpose gives you something to live for. In other words, it gives you a reason to want to be resilient and bounce back.

Without a purpose, you may not even feel the need to be resilient or bounce back from a difficult situation. With this in mind, resilience depends on knowing your life's purpose, even if it is fluctuating. Your life's purpose will fluctuate and change overtime. If it doesn't, you're probably not growing or pushing yourself at all. So, it is completely fine if your purpose is changing or non-definite.

Purpose And Meaning

In the chapter about the components of resilience, one of the components mentioned was meaning, where we explained that resilience is deeply connected to one's meaning in life. In this chapter, we look at how purpose can add to your life's meaning.

How To Find Your Purpose

Finding your purpose involves three things: something in the world or a problem you care about, your natural gifts, and what you love to do or your interests. Your purpose should involve all three.

Cont'd

Here are some questions to think about when trying to find your purpose:

- What did you love doing as a child?
- What do you do in your spare time?
- What is something you always wanted to do?
- What is something that excites or challenges you?
- What are you good at?
- What have other people said you are good at?
- Do you have any training or specific skills?
- What is the topic you're passionate about?
- What is something you are interested in?
- What do you daydream about?
- If you could change one thing in the world, what would it be?
- If you could do anything with your life, what would it be?
- What do you find yourself thinking about when you should be working?
- What do you want to change about your life? Asking yourself these sorts of questions may help you evaluate and understand the problems you care about, your natural gifts, and your interests.

Once again, it is important to remember that your purpose is not definite and never changing. In contrast, your purpose changes as you do. If you find that the purpose you settled on a year ago does not fit anymore, that is fine. Simply come up with a new purpose. There is nothing wrong with changing yourself and your purpose, and, in fact, it is normal and healthy.

Harnessing The Power

Cont'd

In the last four chapters, we looked at how to build connection during times of loss, how to foster wellness during times of poor mental and physical health, how to think healthy thoughts during difficult and uncontrollable times, and how to find a purpose when you feel lost.

The contents of these four chapters directly discuss the components of resilience. At this point, it is important to bring all the components together so that you can boost your resilience and overcome any adverse situation that comes your way. In other words, it's time to discuss what you can do today in order to strengthen your mind so that you can bounce back from all of life's challenges.

Resilience Training

We call learning how to boost resilience "resilience training." Much like endurance training or weight training in the gym, resilience training will take a lot of time and effort to master, and you will always be able to get better.

Additionally, resilience training is like other training in that it is holistic. In other words, it focuses on all four components of resilience: connection, wellness, healthy thinking, and meaning. Some days you may need to emphasize one component over another, but it is important to treat each component equally.

Training Your Attention

Training your attention and awareness is the most important exercise of resilience training. The reason that training your attention is so important for resilience training is that being attentive will allow you to recognize your feelings, your thoughts, and the world around you.

Attention training includes becoming more intentional and purposeful in your life. As previously stated, training your attention requires you to draw attention to your feelings and thoughts so that way you can interpret how you feel, strategize solutions, and connect meaning to the world around you.

In addition to boosting resilience, training your focus also decreases stress, decreases anxiety, and boosts your quality of life. Additionally, training your attention requires you to utilize psychological, emotional, and physical resilience even when you are undergoing a minimal amount of stress.

Here is how attention training relates to the three main types of resilience:

- **Psychological Resilience:** Training your attention requires psychological resilience because it requires you to focus your mind so that way it does not wander aimlessly. As you train your attention, you also train your psychological resilience.

Cont'd

- **Emotional Resilience:** A key aspect of training your attention is either being able to step aside from your emotions when they are unhealthy or acknowledging them when they are healthy. In other words, it forces you to discern between necessary and healthy thoughts and emotions and unnecessary thoughts and emotions. So, as you improve your attention, you also improve your emotional resilience.
- **Physical Resilience:** Whenever you train your attention, you force yourself and your body to remain still or focused on the task at hand. This improves your physical resilience because it makes you more in control of your physical motions. Here are some ways to train your attention:
- **Break Tasks Into Manageable Chunks:** One of the easiest ways to train your attention is to break up tasks, work, or the day into manageable chunks. Many studies have shown that it is easier to focus your attention if it has a set time. At work, for example, set breaks every 52 minutes. If 52 minutes sounds like a lot for you, start with 20 minutes, and work your way up. This will train your psychological and physical resilience.
- **Be Mindful:** Another way to train your attention is to be mindful. Mindfulness is basically having a moment where you focus on the exact moment at hand, nothing before or after. An easy way to practice mindfulness is with a daily meditation, studies have shown that just 10 to 20 minutes of motivation today can improve your focus. Mindfulness improves all aspects of resilience.
- **Practice Attentive Listening:** Attentive listening is when you listen to another person without interrupting, recapping, or using connection words. It requires you to stay engaged in your listening abilities. Attentive listening trains all three forms of resilience.
- **Journaling At Night:** Another way to train your attention is to journal at night. Journaling at night will give you the chance to focus purely on your thoughts and feelings at that moment.

Try to stay in the moment as closely as possible. If you make this into a habit, journaling will also turn into a healthy coping mechanism that will make you more psychologically and emotionally resilient. By practicing some of these techniques every day, you will boost your mental dexterity and resilience even on days when things are going great.

Conclusion

As we have seen, resilience is an important part of life. If you are unable to bounce back from adverse situations, your life will feel difficult, meaningless, and unnecessarily disheartening.

For this reason, it is imperative to train your resilience so that way you can bounce back and enjoy life to its fullest, no matter how difficult a situation may be. In this book, we defined resilience as one's ability to bounce back from adverse situations, and looked at the four types of resilience, which includes psychological, emotional, physical, and community resilience.

Additionally, we looked at the four main components of resilience, which includes connection, wellness, healthy thoughts, and meaning. We then looked at how to develop these four components of resilience during difficult phases of life.

More specifically, we looked at how to build connections during times of loss, how to foster wellness during times of poor mental and physical health, how to think healthy thoughts during difficult and uncontrollable times, and how to find purpose when you feel lost.

Finally, we looked at how to bring all four components together in order to practice resilience training. We specifically discussed how attention training can boost psychological, emotional, and physical resilience.

More so, we recommend training your attention even on your good days so that you are ready for the bad ones. Now that you have learned key strategies to boost your mental dexterity, you can bounce back from any situation and find yourself stronger than before.

It is important to remember to be kind to and patient with yourself as you try to become more resilient. As we stated in chapter one, resilience is a journey, not a destination. The best way to enjoy your journey is to be kind and accept that change won't happen overnight.

You've got this!
